1 Introduction

TXGB-JK-11 is a bendable rubber antenna for GPS+ BDS frequency band. The antenna, with an overall height of about 110mm and SMA-J interface, is suitable for all kinds of GPS frequency band wireless devices, such as automobile 4S shops, automobile dealers, bus station callers, driving schools, taxi companies and individuals, DVD navigation, automobile maintenance, etc.

2 Parameters

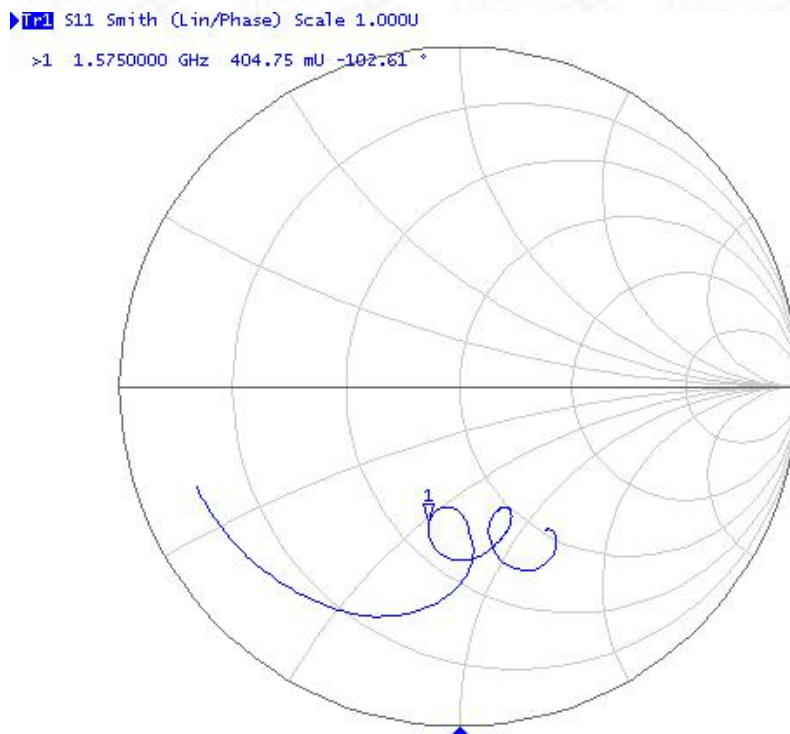

Electrical parameters	
Antenna bandwidth	For BDS/GPS/Galileo/Glonassc
Antenna gain	5dBi
Voltage standing wave ratio	≤ 2
Polarization direction	Vertical polarization
Radiation direction	Omnidirectional
Input resistance	50 Ω
Power capacity	20W
Other Parameters	
Product size	110mm
Weight	8g
Exterior material	TPEE
Interface	SMA-J
Operating temp.	-40 $^{\circ}$ C~+85 $^{\circ}$ C
Storage temp.	-40 $^{\circ}$ C~+85 $^{\circ}$ C

3 Antenna features

VSWR

Smith Chart

4 FAQ

- The antenna frequency must match the frequency of the wireless device, otherwise the communication effect will be poor;
- The lower the communication frequency and the longer the wavelength, the better the diffraction performance;
- When there is a straight-line communication obstacle, the communication distance will be attenuated accordingly;
- Please pay attention to the antenna radiation direction, the incorrect installation direction of the antenna leads to a short transmission distance;
- The ground absorbs radio waves, and the test result near the ground is poor. It is recommended to increase the height;
- Sea water has a strong ability to absorb radio waves, so the seaside test results are not good;
- If there is a metal object near the antenna or placed in a metal shell, the signal attenuation will be very serious;
- The poor impedance matching between the antenna and the communication device will lead to poor communication effects.
